FOR IMMEDIATE RELEASE

BrickImaging World Business Review Segment to Air on International Flights

Fort Collins, CO – January 19, 2007 – Nationwide masonry staining company BrickImaging Inc will be featured on over 1500 flights throughout the month of February on US Airways International flights. The World Business Review segment will reach over 300,000 travelers throughout Canada, Europe, Latin America, and the Caribbean. US Airways is the fifth largest airline in the Nation after merging with America West Airlines in the Fall of 2005. These broadcastings are following BrickImaging's debut segment that aired in late 2006 on CNBC and Bravo networks throughout the US.

BrickImaging Inc is making a name for itself in the masonry industry by changing the color of existing brick, block, mortar, and stone on existing buildings while maintaining the natural appearance of the masonry. Providing a full 25-Year Limited warranty, BrickImaging is confident that treated projects will far outlast the 25-year warranty that protects against any chipping, fading, or peeling. Notable projects have included many buildings for large companies Nationwide including Abercrombie and Fitches™ new Ruehl 925™ stores. BrickImaging's Stayntech™ process is gaining popularity among architects, building owners, and facility managers looking to enhance or change the aesthetic appeal of their buildings.
